1. Introduction

1.1 Background

Interconnexion France-Angleterre (IFA) is a joint venture between the French Transmission Operator RTE and National Grid, operating the subsea electricity link between Great Britain (GB) and France, commissioned in 1986. We have the capability to offer 2GW of electrical energy, from both the GB and French markets.

RTE and National Grid are currently building a second interconnector link to France called **Interconnexion France- Angleterre 2 (IFA2)**. IFA2 is a 1,000 MW high voltage direct current (HVDC) electrical interconnector and this is due to be commissioned in Summer 2020.

IFA & IFA2 are governed by the Access Rules, comprising of the following:

- The Access Rules, these rules are dependent on whether we have a Deal or No Deal Brexit scenario. We will update this document and the IFA website when the situation is confirmed to inform you which set of access rules apply. In the meantime, you can find these access rules in draft form on the consultations section on the [IFA website](#). We recommend you familiarise yourself with both the Deal and No Deal Rules for Single Allocation Platform/Regional Nomination Platform.
- The Harmonised Allocation Rules for Forward Capacity Allocation (FCA) should be read in conjunction with (and as amended by);
- The Border Specific Annex (BSA)

1.2 Purpose

The purpose of this guide is to set out how customers who wish to trade on IFA & IFA2 commence the registration process. You will see several parties detailed that are all involved in this process including other National Grid businesses, however, business separation applies between National Grid Interconnectors Limited and the other National Grid businesses. The Customer Portfolio team will be your main point of contact throughout the registration process.

2. The Registration Process

The table below is a high-level process for registering as an IFA & IFA2 customer. There are two processes to choose from depending upon whether you wish to buy capacity only (non – nominating) or buy and nominate capacity (nominating).

Interface with	Steps	Non-Nominating	Nominating
JAO	1. Complete Registration with the Joint Allocation Office (JAO)	✓	✓
IFA & IFA2	2. Complete Registration with the Regional Nomination Platform (RNP)	N/A	✓
Elexon & NGESO	3. Register with Elexon	N/A	✓
	4. Register with National Grid Electricity System Operator (NGESO)	N/A	✓
	5. Register Balancing & Mechanism Units (BMUs) for IFA with NGESO and Elexon	N/A	✓
RTE	6. Register as Balancing Responsible Party (BRP) with RTE	N/A	✓

This guide contains further detail on the steps outlined above.

2.1 Complete Registration with the Joint Allocation Office (JAO)

For Existing JAO customers

In order to bid for capacity on IFA & IFA2's auctions, customers are required to register with JAO to gain access to the Single Allocation Platform (SAP). Please note that if you are already registered with JAO, you will only need to sign an amendment. Please contact JAO to start this process.

Email: contact@jao.eu

Phone: +352 27 62 38 01

For new JAO Customers

If you are not already on JAO then you will be required to sign a Participant Agreement with JAO in order to participate in IFA & IFA2 auctions. You will also need to complete the following steps:

- **Collateral**
Complete the collateral process with JAO.
- **Access to Single Allocation Platform (SAP)**
Once registered with JAO, you will have access to SAP and can participate in IFA & IFA2 long term auctions. The auction schedule is available on the [IFA website](#).

Further information

Please refer to the [JAO website](#) for documents and further detail on the registration process. Please click on Registration from the menu on the left- hand side of the webpage.

2.2 Complete Registration with the Regional Nomination Platform (RNP)

This step needs to be completed by customers who wish to nominate their capacity.

Participation Agreement

Please contact the Customer Portfolio team (ifa.customerenquiries@nationalgrid.com) to register your interest to nominate your capacity on IFA & IFA2. You will then be sent the RNP Participation Agreement. RNP is the platform where you will be able to nominate the capacity bought on JAO. The agreement will then be countersigned by National Grid Interconnectors and RTE and you will receive a copy once a go live date has been agreed. By completing the Participation Agreement, you will be registered to nominate capacity for both IFA & IFA2.

BMU Registration for IFA2 will commence after the cable is energised next year (2020), we will inform you nearer the time as to when you can commence your BMU registration with Elexon for IFA2. In the meantime, when completing the RNP Participation Agreement, under the IFA2 section, please fill in the BMU field as “pending”.

Access to RNP

You will receive a user access form to complete, this form will need to be returned to the RNP Helpdesk (rnp.helpdesk@unicorn.com). The RNP will then provide you with access to the test environment. This will move to the live environment on your go live date.

Training

As part of your registration you will receive a user guide for RNP. If you require further training, please contact the RNP Helpdesk (rnp.helpdesk@unicorn.com)

2.3 Register with Elexon

Please refer to the [Elexon website](#) which will take you through the necessary steps required to register as an Interconnector User.

2.4 Register with National Grid Electricity System Operator (NGESO)

As an Interconnector User, you are deemed to be using the National Electricity Transmission System (NETS) due to the onward transmission from the interconnector to the NETS, therefore Interconnector Users should sign a bilateral agreement (Use of System Offer) to use the system and accede to the Connection and Use of System Code (CUSC). Admission as a CUSC Party is a requirement to ensure compliance with Grid Code obligations.

You should complete and sign the exhibits to the CUSC below, which can be found on [NGESO's website](#).

- Use of System Application (Exhibit F of the CUSC)
- CUSC Accession Agreement (Exhibit A of the CUSC)

Once, the above two are complete, NGESO will send you the signed Use of System Offer and Confirmation Notice (Exhibit H of the CUSC).

Contact: Transmissionconnections@nationalgrid.com

2.5 Register Balancing & Mechanism Units (BMUs) for IFA with NGESO and Elexon

BM Units are the units used to represent all energy export and import in Settlement. There are specific BM Units assigned to each Party and we sum up their volumes and contracts, for each Party, when we carry out the Settlement calculations.

If you wish to nominate your capacity on IFA & IFA2, you are required to register two Interconnector BM Units for each interconnector for your production and consumption accounts relating to your physical flows. As mentioned above, BMU registration for IFA2 will commence after the cable is energised next year (2020), we will inform you nearer the time as to when you can commence the BMU registration for IFA2.

Application form

As an Interconnector Use Lead Party, you will firstly need to complete National Grid BM Unit Registration (contact BMU.registration@nationalgrid.com) before you complete the BSCP15/4.1 BM Unit registration. This is because National Grid will provide you with the

National Grid Interconnector BM Unit ID and agree the Effective From Date, both of which you should then include on your BSCP15/4.1 form. In addition, the BM Unit ID in column 1 of the BSCP15/4.1 form is based on these ID's, by adding an I_ in front, e.g. I_IFD-xxxx1 & I_IFG-xxxx1.

You can then register a pair of Interconnector BM Units by completing a [BSCP15/4.1 form](#) "Registration of a BM Unit for a CVA Metering System" Form, by 30 working days prior to the Effective From Date, or as agreed with National Grid, to bm.unit@elexon.co.uk and neta@imserv.com. The Interconnector ID is also required on the BSCP15/4.1 Form.

2.6 Register as Balancing Responsible Party (BRP) with RTE

You will be required to register with RTE as a Balancing Responsible Party which involves completing and signing an agreement. Please contact RTE (marketservices@rte-france.com) to start this process. If you already have a BRP with RTE on another border, there is a fast track process available, please mention this when you contact the team.

3. Communication and Support

Throughout the registration process, the Customer Portfolio team will be your first point of contact for support:
